

OPERATING TIMESWITCH

TOPICA 500 PLUG IN DIGITAL TIMESWITCH

Before programming

Press the reset button, using a pencil or similar instrument. This clears the memory of unwanted information in readiness for programming. The reset button should be used in the event of local interference causing the timeswitch to appear to malfunction. Local interference, dependent on location, may be present from time to time.

Set current time and day

1. Press and hold the  'clock symbol' button during operations 2 to 5 below.
2. Press the 'day' button to select the current weekday (1 = Monday)
3. Press the 'h' button to select the correct hour.
4. If setting in Summertime, press the +/-1h button once.
5. Press the 'm' button to select the correct minute.
6. Now release the  button - the colon between hours and minutes will flash to indicate that the clock is running.

Entering switching times

1. Press the 'Prog.' button to select the first free memory location.
2. Press the 'day' button to select the day or days required for the switching to occur. You have a choice of day groups: 1 - 7 (Mon - Sun), 1 - 6 (Mon - Sat), 1 - 5 (Mon - Fri), 6 - 7 (Sat & Sun), or any individual day. Each programme space automatically starts with the day selection 1 - 7. You can change this with the day button.
3. Press the 'h' button to select the hour the switching is to occur.
4. Press the 'm' button to select the minute the switching is to occur.
5. Press the  button once to select an ON  instruction, or twice to select an OFF  instruction.
6. Press the 'Prog.' button to store your programmed information, and select the next free programme space. Or store your programme with the  button if you have finished programming.
7. Programme further switching instructions as above.
8. Pressing the 'Prog.' button one additional time after you have finished programming displays the remaining number of programme spaces e.g. 'Fr 18'. If all programme spaces are full, 'Fr 00' will appear.

Important Note: After programming is completed, and you return the timeswitch to the current time display with the  button, the timeswitch will not activate any switching instruction required for the current time. You may need to manually select the desired switching state with the  button. Thereafter, as the unit encounters further switching instructions in the memory in real time, it will correctly activate all subsequent switching instructions.

Manual override

With the  button you can manually operate the switch to switch ON or OFF outside the programmed times, or you can put the switch into a permanent ON or OFF condition.

The first press of the  button advances the output to ON or OFF, without disrupting the programme sequence. The second press fixes the output in the continuously ON  condition. The third press fixes the output in the continuously OFF  condition. In either fixed condition, the timeswitch will only revert to the timed condition if you press the  button once more.

Read or change programmed information

Press the 'Prog.' button repeatedly to view each of your programmed instructions in the order in which they were programmed. You can stop to alter any of the instructions using the buttons as described in "Entering switching times" above.
